

North American Warm Desert Riparian Mesquite Bosque

Low-elevation (<1100 m) riparian corridors along intermittent streams in valleys of southern Arizona and New Mexico, and adjacent Mexico. Dominant trees include *Prosopis glandulosa* and *Prosopis velutina*. Shrub dominants include *Baccharis salicifolia*, *Pluchea sericea*, and *Salix exigua*.

Poor = <10% shrub cover, low forb diversity, few natives, high invasives

Fair = 10-20% shrub cover, moderate native forb/grass mix, few invasives

Good = >20% shrub cover, diverse native forbs, few or no invasives
